- **DESCRIPTION OF THE PROJECT**

The selected students in the framework of this project, “Erasmus plus-k2 school partnership”, coming from different European secondary schools and aged between 11 and 16, will develop a project about cultural and natural heritage in their countries.

It’s a multidisciplinary project where different departments (Geography and History, French, English, Biology, Technology, Mathematics...) are involved and whose main aim is to create an application for mobile phones and digital pads which includes historical routes of every place, as well as getting to know and share experiences of the different educational systems.

Furthermore, local organisms will join in order to build a real European project which will contribute to the spreading of the knowledge of each one of the participating countries.

French will be the working language though all the projects will be translated into the different languages of the participating countries.

The length of the project is three years.
